- Signs & Symptoms of infection
- Wound Swab collection
- Cleansing and solutions
- Wound bed preparation
- Understanding limitations
- Antimicrobial treatment & stewardship

Assessment

Refresh your knowledge and complete the
10 multiple choice questions.

Workplace Project: *Preventing Wound Infection*

1. Select a patient with a wound that you have recently provided care
2. Review the medical record
 - Has a wound swab been collected?
 - Were antibiotics prescribed?
 - Determine if the patient had covert, overt, or chronic signs of infection
 - What other strategies could or can be implemented to prevent or treat the wound infection.
